

Ribbons and Topping Foils

A FULL SPECTRUM OF STANDARD AND CUSTOM COLOR OPTIONS

Capitalize on the growing market demand for attractive, highly personalized cards. With Datacard® Certified Supplies, you can produce colorful cards with exceptional image quality, consistency and color fidelity. We offer a wide variety of ribbons in conventional and custom colors matched to exact user specifications ready for use in your Datacard® equipment. Our graphics ribbons and topping foils feature Intelligent Supplies Technology™ benefits that enhance print results, increase system usability and optimize ribbon conservation — for high-quality card results.

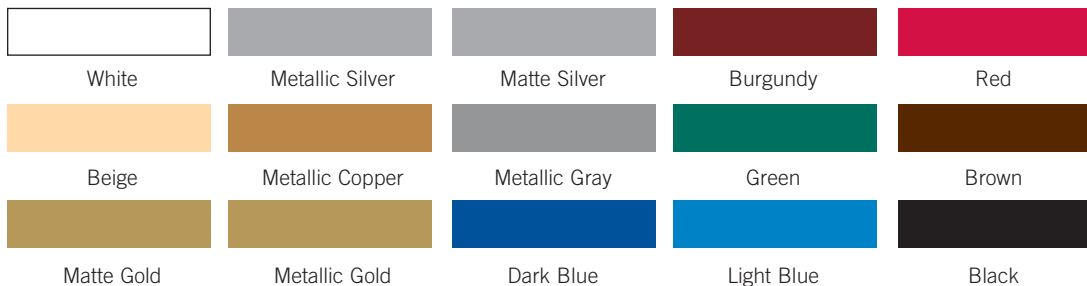

MONOCHROME RIBBONS*

Our graphics monochrome ribbons are available in a wide range of colors using thermal transfer technology. These durable resin-based ribbons offer excellent scratch, smudge and chemical resistance for long-lasting cards with brilliant colors. Our monochrome ribbons deliver crisp, exceptional opacity in text, images and bar code printing with clean fine line detail even for the most complex patterns.

TOPPING FOILS*

Our topping foils have been specially formulated for abrasion resistance and strong durability. These foils apply quickly with clean transfer for a smooth, sharp and detailed foil transfer to embossed characters, which is critical for maintaining top production performance and speeds in high-quality card issuance programs.

INDENT RIBBON

Our abrasion-resistant matte pigment indent ribbons are formulated for direct stamping onto the card signature panel as well as directly onto the card surface.

SCRATCH-OFF RIBBON

Our scratch-off graphics monochrome ribbon provides additional security by hiding an area of confidential information that is revealed only by scratching off surface print material.
